

Skillo: local on-the-go Emergency and skill search application

The Problem: Emergencies don't happen at convenient times or in familiar places. You get a flat tyre on a highway at midnight, or a family member needs urgent help in an unfamiliar area. The nearby garages and clinics are closed or it's an odd hour, and you don't know anyone there to call. Meanwhile, an off-duty mechanic or a travelling doctor might be just 500 metres away, with no real-time way to reach them.

The build: Skillo is a hyperlocal, on-the-go emergency app that turns travelling skilled citizens into a roaming safety net. A seeker picks the help they need (roadside mechanic, doctor, emergency plumbing, or quick physical help) and hits Broadcast Now. Skillo runs a progressive geo-scan that starts at 2 km and expands to 4 km and then 6 km until verified responders are found. Tapping Request & Instant Handshake unlocks the responder's direct phone contact, WhatsApp and live coordinates, with zero platform commission. Responders can toggle Duty Mode on or off, and they earn a verified badge through a privacy-preserving Aadhaar e-KYC OTP check, so seekers know who is coming.

3. Where AWS Fits (Architecture)

- AWS SAM (Serverless Application Model): Defines Infrastructure as Code (`template.yaml`).
- AWS Lambda (Python 3.12): Handles stateless request routing, Haversine geospatial radius computation, and Aadhaar OTP verification.
- Amazon DynamoDB: Low-latency NoSQL database storing roaming helper coordinates, active request lifecycle, and mutual rating scores.
- LocalStack / SAM CLI: Enables local zero-cost cloud emulation on Windows/Linux without AWS billing.

4. Open-Source Tools Used

- React Native (Expo): Cross-platform mobile client for Android, iOS, and Web.
- OpenStreetMap / MapLibre: Open-source, zero-cost map tiles and location visualization.
- AWS SAM CLI & LocalStack: Open-source tooling for running and testing serverless AWS infrastructure locally.
- Python 3.12 Standard Library: Math/Haversine calculations without heavy external GIS dependencies.

Login mobile app Ui Expo Go, in this we have sign in page where we can register using Email and Mobile no, SOS tab which connects to emergency nos even if the users are not registered, signup tab for registering with Aadhar OTP Authentication enabled. Selection of services need and search nearby, triggered demo in next page for the person who has registered for specific skills, accept which takes directly to the phone book with the call no or WhatsApp options.

SHIP IT DEPOLY ON AWS

"The Skillo backend is actively deployed in production on AWS Cloud (us-east-1) via AWS SAM, leveraging Amazon API Gateway, AWS Lambda, and Amazon DynamoDB for ultra-low latency serverless dispatch. The web platform is hosted globally on AWS Amplify, while our mobile application running via Expo Go communicates directly with this live AWS serverless infrastructure in real time."

Your Official Live URLs:

Component	Service	Live URL
Frontend Web App	AWS Amplify (Global CDN + SSL)	https://main.dmsrf0xt3grsc.amplifyapp.com
Backend REST API	Amazon API Gateway + Lambda	https://e7xzm0y48.execute-api.us-east-1.amazonaws.com/Prod
Database	Amazon DynamoDB	SkilloUsers & SkilloRequests

*"Skillo is a fully cloud-native application deployed 100% on AWS (us-east-1). The frontend web portal is globally hosted and distributed with SSL via **AWS Amplify**, while our mobile client runs seamlessly across devices. The serverless backend is orchestrated using **AWS SAM**, executing stateless geospatial dispatch through **AWS Lambda** and **Amazon API Gateway**, backed by ultra-low latency NoSQL persistence on **Amazon DynamoDB**."*

*"At its heart, **Skillo** is more than just an app — it is a living, roaming safety net and a decentralized micro-economy.

For citizens in distress, it delivers immediate, lifesaving help anytime, anywhere, within minutes. And for skilled professionals, it turns idle hours and everyday commutes into direct earning opportunities — allowing them to generate income whether on the move or resting at home, with **zero platform commission**.

By bridging urgent human need with nearby human skill, Skillo proves that cloud technology can build resilient, self-sustaining communities across Bharat and the globe.

Thank you!"*
